SUMMARY

Full Stack Developer with hands-on internship experience building web apps and developer tools using React, Next.js, Node.js, and Python. Comfortable working across the stack — from UIs and REST APIs to AI integrations. Active technical writer with a growing audience on Dev.to.

PROJECTS

Auto Commit — Git Automation Desktop App — *Electron, React, Node.js, Vite, Tailwind CSS* — github.com/TROJANmocX/Auto-Commit-Desktop-App

- Built a cross-platform Electron + React desktop app that automates Git commit scheduling with a live GitHub-style heatmap preview, multi-branch support, and one-click rollback. Gained 111 stars and 22 forks organically.
- Moved all Git operations to an isolated Node.js worker thread to keep the UI non-blocking; shipped a self-contained GitHub Releases auto-updater with real-time progress bar and silent install — zero extra npm dependencies.

Invoice Digitization & Tax Prediction Tool — *TypeScript, Next.js, Python, FastAPI, EasyOCR* — github.com/TROJANmocX/Invoice-Digitization-and-Tax-Prediction-Tool

- Built a full-stack web app that extracts structured invoice fields (vendor name, GSTIN, line items, totals) from uploaded PDFs and images using EasyOCR and regex pattern matching on a FastAPI backend.
- Implemented GST rate prediction (0%, 12%, 18%) by item type with JSON and Excel export, cutting manual data-entry steps for small accounting workflows.

VibeCraft AI — Emotion-Powered Moodboard Generator — *Next.js 14, TypeScript, OpenAI API, Gemini API, Framer Motion* — github.com/TROJANmocX/VibeCraft-AI

- Integrated OpenAI and Gemini APIs to detect emotional tone from user text and dynamically generate mood-matched visuals, music cues, quotes, and journal prompts in real time.
- Built with Next.js 14 App Router and full TypeScript coverage; deployed on Vercel with CI via GitHub Actions and smooth Framer Motion animations throughout.

MIA — AI-Powered Desktop Assistant — *Python, OpenCV, MediaPipe, FastAPI* — github.com/TROJANmocX/Project-MIA

- Built a real-time gesture- and voice-controlled desktop assistant using OpenCV and MediaPipe to process live webcam input and map hand landmarks to cursor control, volume, and screenshot commands.
- Structured the FastAPI backend into three independent modules — gesture engine, voice handler, OS control — so each can be tested and extended independently.

EXPERIENCE

Web Development Intern • *Zaalima Development Pvt. Ltd.* • Mar 2026 – May 2026

- Built and refined UI components using React, HTML, CSS, and JavaScript as part of a team; went through regular code reviews and iterated on feedback.
- Managed changes with Git, took part in agile sprint cycles, and contributed to feature development and bug fixes across the shared codebase.

SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML, CSS

Frontend: React.js, Next.js 14, Tailwind CSS, Framer Motion

Backend: Node.js, FastAPI, REST APIs, JWT Auth, WebSockets

AI / APIs: OpenAI API, Gemini API, OpenCV, MediaPipe, EasyOCR

Databases: MongoDB, MySQL, Supabase

Tools: Git, GitHub, Vercel, Electron, Vite, Postman, Linux

EDUCATION

B.Tech in Computer Science (Data Science) • *SRM Institute of Science and Technology* • 2023 – 2027

Class XII: 74.5% • Class X: 86.6%

CERTIFICATIONS & ACHIEVEMENTS

- Introduction to Model Context Protocol — Anthropic
- Data Engineering on AWS Foundations — Amazon Web Services
- Foundations of Prompt Engineering — Amazon Web Services
- Grew technical blog to 11,000+ followers and 47,000+ views on Dev.to, writing tutorials on full-stack development, AI integrations, and developer tooling.
- Auto Commit Desktop App organically reached 111 GitHub stars and 22 forks — built, shipped, and maintained solo.
- Active LeetCode practitioner focused on data structures, algorithms, and dynamic programming.
